

GSA Fraud Task Force – Savings Tally

Transparent breakdown of reported savings, cost avoidance, and recoveries since January 2025

Prepared July 20, 2026 | For a skeptical audience – numbers are itemized where possible; residual is explicitly shown

1. Top-Line Tally

GSA has publicly stated that it has driven **more than \$60 billion** in federal contract savings since January 20, 2025. That figure is a high-level claim. The concrete, published line items that can be added together total roughly **\$10–11 billion**. The remaining ~\$50 billion is not further itemized in public materials and is shown below as residual.

STOPPED / AVOIDED	UNCOVERED / PIPELINE	PROSECUTED / RECOVERED
~\$10–11 billion Itemized actions already taken	~\$3+ billion Identified, not yet fully realized	Tens of millions OIG recoveries + FCA settlements

The three columns above are the recommended toggle categories for a public-facing or internal dashboard. The large residual inside the \$60B claim sits under Stopped only as an unallocated residual line (see detail below).

2. How to Read This Document (Skeptical-Audience Notes)

- **Stopped / Avoided** = actions already executed (contracts canceled, leases terminated or renegotiated, properties sold, OneGov discounts locked in and being used, fleet reductions completed, etc.). Savings are realized or highly certain cost avoidance.
- **Uncovered / Pipeline** = opportunities that have been identified but are not yet fully realized (properties still in disposition process, open OIG recommendations, price-variability risks still under review).
- **Prosecuted / Recovered** = monetary recoveries, settlements, and judgments from investigations and False Claims Act actions. These are real but orders of magnitude smaller than the efficiency numbers.
- The \$60B headline and the sum of the itemized milestones are **not the same number**. Treating them as identical would be inaccurate. This document keeps them separate.

3. STOPPED / AVOIDED – Itemized Line Items

These are the concrete published figures that can be added. Approximate total of the items below: **~\$10–11 billion**.

Amount	Line Item	Notes
\$1.1B	OneGov first-year savings (IT consolidation)	20 unified agreements; discounts up to 90%. Announced Apr 2026.
\$7.1B	FY 2025 acquisition-program savings to customer agencies	Category management, City Pairs, SmartPay, IT, Assisted Acquisition, etc.
\$730M	Lease renegotiations & portfolio reductions	Cost avoidance from actions already taken.
\$415M	Avoided repairs & operating costs – 90 properties disposed	Portfolio reduced by >3 million sq ft.
\$182M	Revenue from property sales	Cash proceeds from the 90 dispositions.
>\$500M	Unnecessary / underperforming contracts canceled (inside GSA)	Direct cancellations.
~\$24M / yr	MAS rightsizing – ~1,600 contracts eliminated	Annualized estimate from FY 2025 actions.
Not \$ quantified	Fleet reduction (>1,000 vehicles) + consolidation of 1,123 vehicles into GSA Fleet	Cost savings exist but no single published dollar total.
Not \$ quantified	Login.gov blocks of suspected fraudulent identity attempts + IAL upgrades	Preventive; daily volume reported but no cumulative \$ savings published.
~\$900M (10-yr)	Regulatory streamlining (FAR, FMR, Travel Regulation, etc.)	Projected over the next decade, not a one-year cash figure.

Residual / Unallocated Portion of the \$60B Claim

GSA's public claim is >\$60 billion in contract savings. The itemized Stopped lines above total roughly \$10–11 billion. That leaves a residual of approximately **\$49–50 billion** that GSA attributes to broader contract savings (government-wide buying-power effects, category management, pricing improvements enabled by FAR changes, etc.) but has **not published as a detailed line-item list**.

For any dashboard or tracker that must show the full \$60B, the recommended treatment is a single residual line under Stopped labeled: "Other GSA-reported contract savings (not further itemized in public sources)." This keeps the arithmetic honest and lets a skeptical reader see exactly what is concrete versus what is residual.

4. UNCOVERED / PIPELINE – Identified but Not Yet Fully Realized

These items have been publicly identified. They are not yet (or not fully) realized as cash savings or final dispositions.

Amount	Line Item	Status / Notes
~\$3B potential	45 additional high-cost / underutilized properties identified for accelerated disposition	If completed: ~15M sq ft; capital repairs + operating expense avoidance. Still in process.
Hundreds of millions	GSA OIG financial recommendations (potential cost savings & recoveries)	Recent semiannual periods: >\$274M and >\$360M recommended in two separate periods. Not all will convert 1:1 into recoveries.
Not \$ quantified	Price variability and overpayment risk in MAS / other channels	OIG has flagged significant price variability; work ongoing.
Context only	Government-wide improper payments (~\$186–200B annually estimated)	Login.gov and Task Force participation are positioned as contributing tools; GSA-specific \$ impact not isolated.

5. PROSECUTED / RECOVERED – Enforcement Outcomes

These are actual monetary recoveries, settlements, and judgments. They are material but far smaller than the efficiency numbers. GSA OIG works with the Department of Justice on many of these matters.

Amount	Matter / Source	Notes
>\$40.3M	GSA OIG monetary recoveries (one recent six-month period)	From investigations and related actions.
~\$2.5M	GSA OIG recoveries (another recent period)	Varies significantly by reporting period.
~\$14.75M	Hill Associates / Hill ASC – FCA settlement (IT services on GSA schedule)	Alleged unqualified personnel, unauthorized services, unapproved fees.
~\$9.58M	NORESCO – FCA settlement (energy savings performance contracts)	Alleged overcharging on 29 federally funded ESPCs.
~\$21.3M	Broadway Electric / Cornerstone – FCA settlement (SDVOSB set-aside fraud)	Improper obtaining of contracts reserved for service-disabled veteran-owned small businesses.
~\$3.1M	Sanford Federal – FCA settlement	Alleged violations across 49 government contracts.
Various	Additional bid-rigging, HUBZone, employee misconduct, and other procurement-integrity cases	Restitutions, forfeitures, and civil penalties; individual amounts vary.

6. White House Task Force Participation

On May 28, 2026, GSA formally joined the White House Task Force to Eliminate Fraud (chaired by the Vice President). GSA is contributing procurement, technology, shared-services, real-estate, analytical, and investigative capabilities to help detect irregularities and strengthen oversight of contracting-related waste, fraud, and abuse. No separate dollar savings figure has been attributed solely to Task Force membership as of this date.

Disclaimer for skeptical readers: This document deliberately separates (1) the concrete, additive line items that appear in public GSA and OIG materials from (2) the residual portion of GSA's \$60 billion claim that has not been itemized. The three categories (Stopped / Uncovered / Prosecuted) are an interpretive framework for tracking and visualization; they are not an official GSA taxonomy. Some figures are cost avoidance or multi-year projections rather than single-year cash recoveries. Always consult the primary sources for the most authoritative numbers. Last compiled July 20, 2026.
